

### **Social Media Recording Tips:**

1. Try to get your camera (phone, computer, device) at eye level or slightly above. It is more flattering and more professional than up the nose.
2. Check your background. Don't be the person with dirty underwear or worse behind you.
3. Check your lighting. Do the selfie thing and try different angles. Teenage girls may be vain, but they aren't wrong.
4. Try to record around soft surfaces like carpet or drapes. It reduces the God effect on your voice.
5. Reduce unnecessary noise. The vortex that is your ceiling fan and the Keurig in the background may not be the soundtrack you're looking for.
6. Dress like you have something important to say. Unless it's not. Then don't post.
